# Agenda

- ❖ Intro:
  - ❖ McStas interoperability
  - ❖ McStas scattering kernels
  - ❖ Data Analysis software // scattering kernels
- ❖ First example
  - ❖ SasView
- ❖ Exercise

# McStas – key features

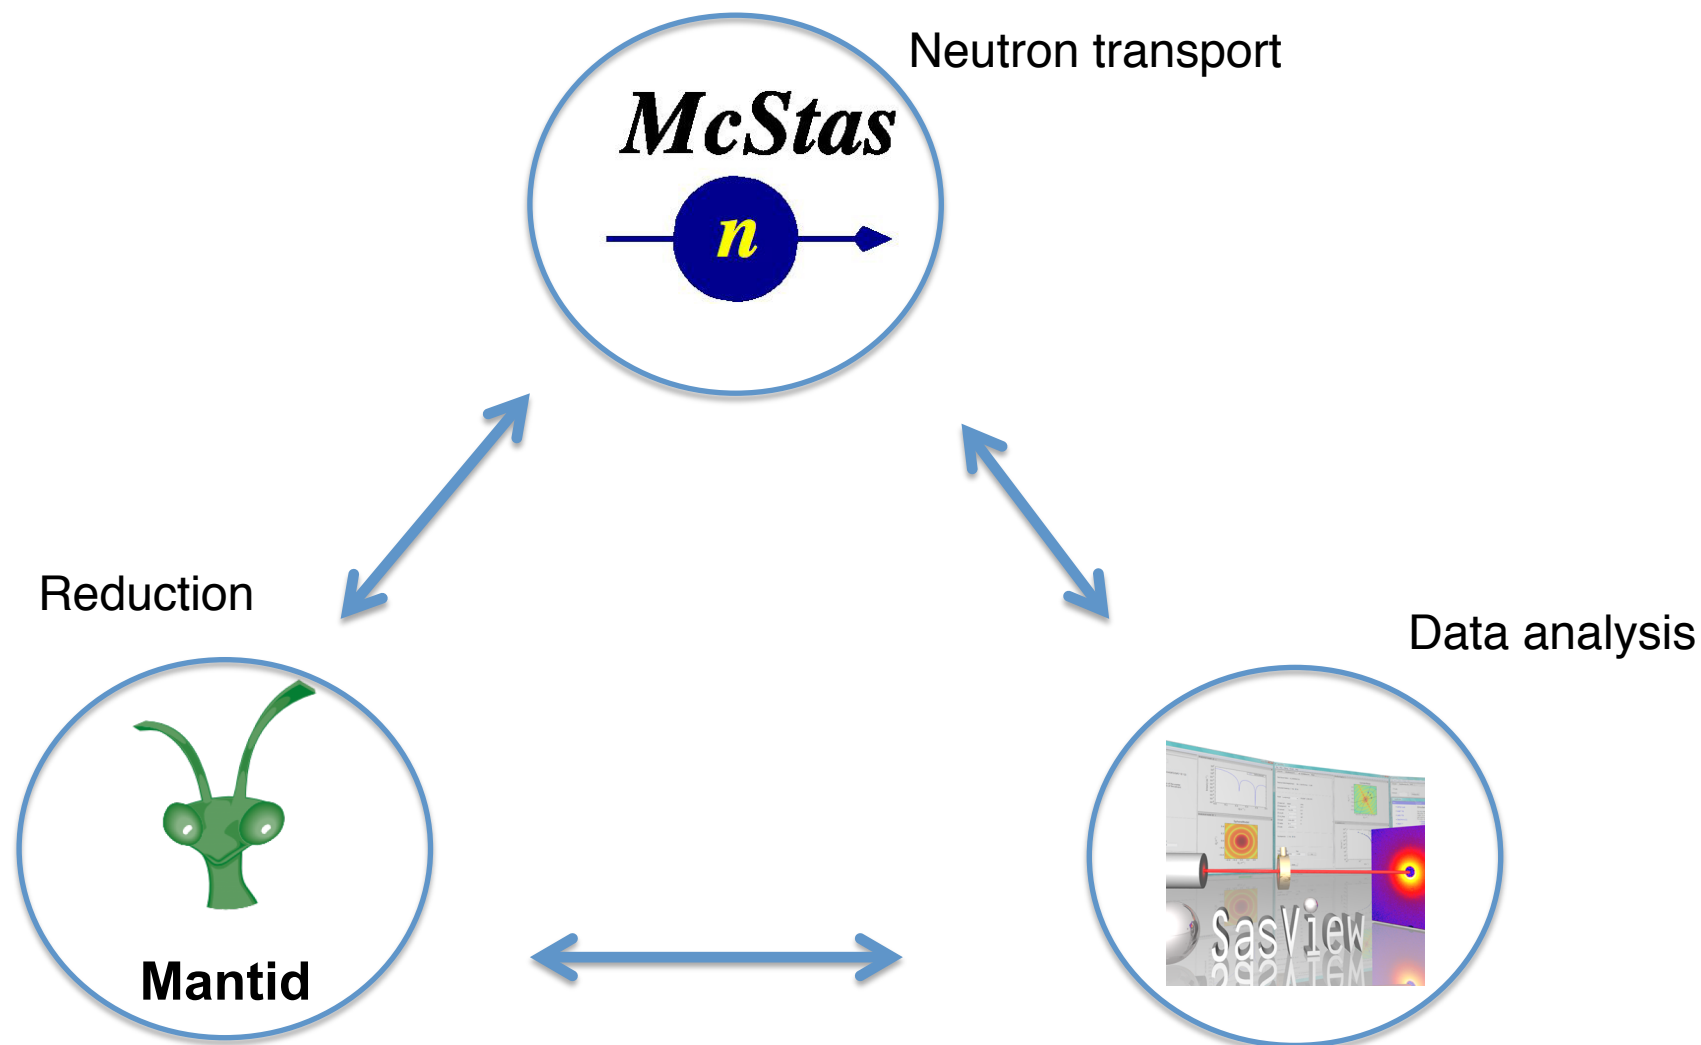

ESS McStas Training 2016  
May 30th - June 1st

- ◆ Does one well defined job: Neutron transport
- ◆ Output of McStas is well defined:  $p$ ,  $x$ ,  $v$ ,  $s$ ,  $t$
- ◆ Easy to add and define new transport and scattering properties (c-code)

# McStas interoperability

# McStas interoperability

ESS McStas Training 2016  
May 30th - June 1st

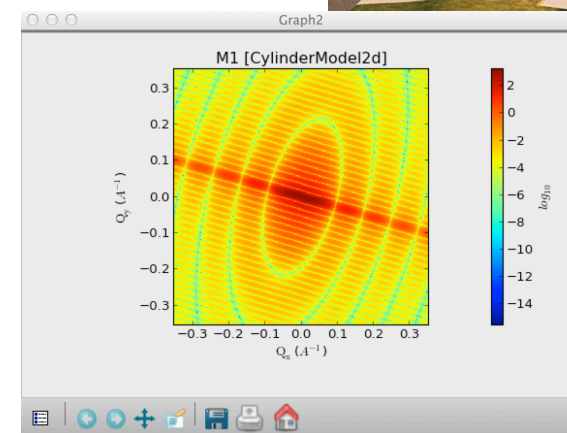

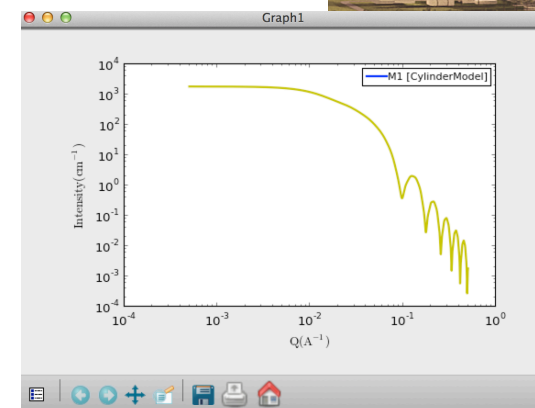

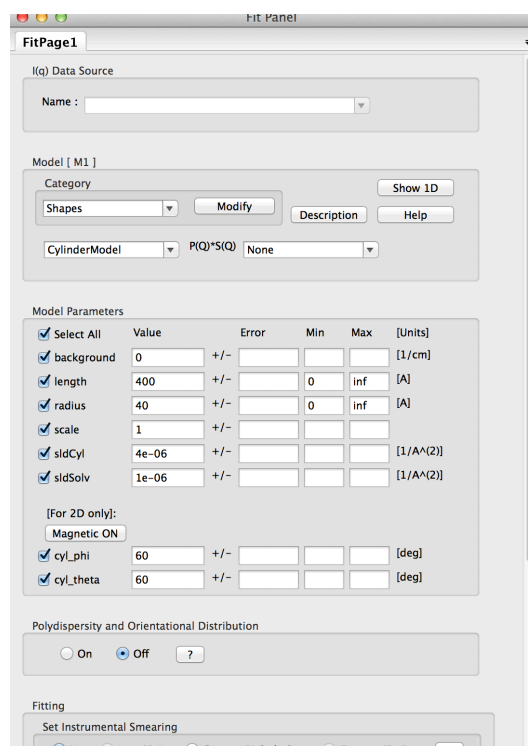

- ◆ Try to link different simulation tools as much as possible
  - ◆ McStas -> Neutron transport
  - ◆ Mantid -> Data reduction
  - ◆ Data analysis -> Your own preferred fit engine of choice
- 
- ◆ E.g. SANS
  - ◆ Use same scattering kernels in the neutron transport simulations = McStas
  - ◆ Use same scattering kernels in the analysis tool = SasView
  - ◆ Prototype: SasView models available in McStas

# SANS - SasView

- ❖ LoKI team needed 2D scattering kernels in McStas
- ❖ Use SasView scattering kernels in McStas

SasView scattering kernel: Orientated cylinder

6

# McStas mcdoc: SasView\_model

[ [Identification](#) | [Description](#) | [Input parameters](#) | [Output parameters](#) | [Links](#) ]

## The SasView\_model Component

This sample component applies sasview models as scattering kernels. NOTE: add the flag "-std=c99" to "C flags" in the mcgui or mcgui-py config.

### Identification

- **Author:** Jakob Garde
- **Origin:** SasView, ESS, DTU
- **Date:** 14.07.2015
- **Version:** 0.4

### Description

Shape:

- A filled box with dimensions xwidth, yheight and zdepth.
- A cylinder with dimensions radius and yheight.
- A filled sphere given by radius.

These parameters are mutually exclusive.

Example (spheres in thin solution:

```
SANS_sasview_model(model_index=31, model_pars={1, 2, 60},  
                    xwidth=0.01, yheight=0.01, zdepth=0.005)
```

Available [SasView models](#) are found in the table below

(A few models may require manual documentation lookup using the above link to the SasView site)

MDOC

Model no.	Model name	Parameters
0	None	None
1	<a href="#">barbell</a>	(sld, solvent_sld, bell_radius, radius, length)
2	<a href="#">barbell_xy</a>	(sld, solvent_sld, bell_radius, radius, length, theta, phi)
3	<a href="#">bcc_paracrystal</a>	(dnn, d_factor, radius, sld, solvent_sld)
4	<a href="#">bcc_paracrystal_xy</a>	(dnn, d_factor, radius, sld, solvent_sld, theta, phi, psi)
5	<a href="#">capped_cylinder</a>	(sld, solvent_sld, radius, cap_radius, length)
6	<a href="#">capped_cylinder_xy</a>	(sld, solvent_sld, radius, cap_radius, length, theta, phi)
7	<a href="#">core_shell_cylinder</a>	(core_sld, shell_sld, solvent_sld, radius, thickness, length)
8	<a href="#">core_shell_cylinder_xy</a>	(core_sld, shell_sld, solvent_sld, radius, thickness, length, theta, phi)
9	<a href="#">cylinder</a>	(sld, solvent_sld, radius, length)

### 2.1.14. CylinderModel

This model provides the form factor for a right circular cylinder with uniform scattering length density. The form factor is normalized by the particle volume.

For information about polarised and magnetic scattering, click [here](#).

#### 2.1.14.1. Definition

The output of the 2D scattering intensity function for oriented cylinders is given by (Guinier, 1955)

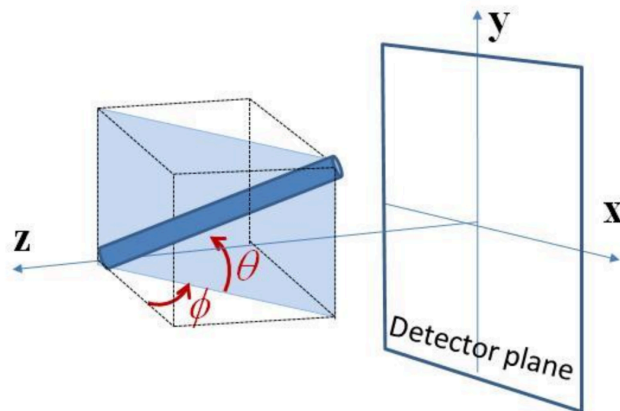

$$P(q, \alpha) = \frac{scale}{V} f^2(q) + bkg$$

where

$$f(q) = 2(\Delta\rho)V \sin(qL \cos \alpha / 2) \frac{J_1(qr \sin \alpha)}{(qr \sin \alpha)}$$

and  $\alpha$  is the angle between the axis of the cylinder and the  $q$ -vector,  $V$  is the volume of the cylinder,  $L$  is the length of the cylinder,  $r$  is the radius of the cylinder, and  $\Delta\rho$  (contrast) is the scattering length density difference between the scatterer and the solvent.  $J_1$  is the first order Bessel function.

To provide easy access to the orientation of the cylinder, we define the axis of the cylinder using two angles  $\theta$  and  $\phi$ . Those angles are defined in Figure 1.

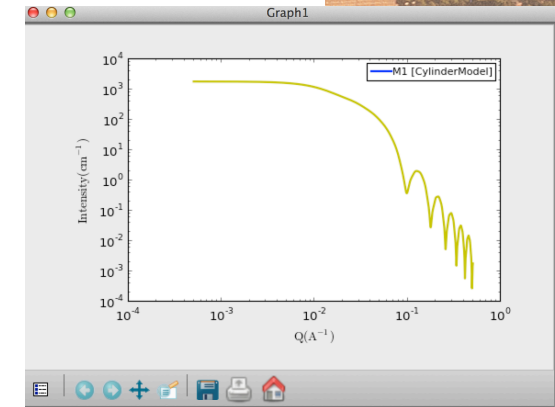

# McStas interoperability

# SasView -> McStas -> SasView

- ◆ SasView cylinder model (1D) scattering kernel used in McStas
- ◆ radius = 40 Å, length = 400 Å
- ◆ McStas event data saved as  $I(q)$
- ◆ SasView reads McStas  $I(q)$  data
- ◆ SasView fit engine gives:
  - ◆ radius = 40 Å
  - ◆ Length = 401 Å

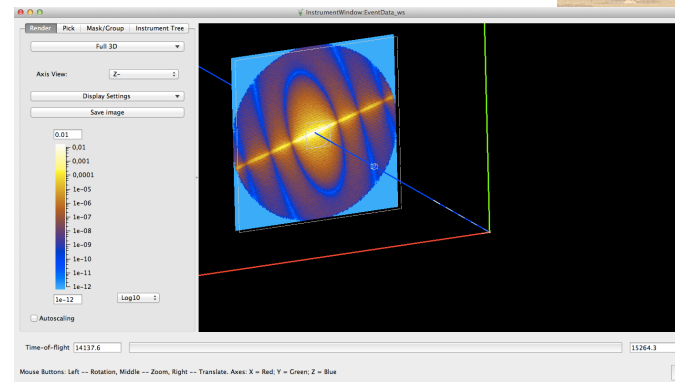

# SasView -> McStas -> Mantid -> SasView

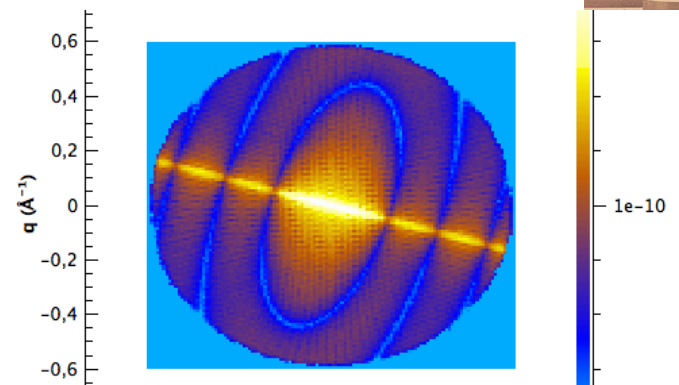

ESS McStas Training 2016  
May 30th - June 1st

McStas -> event data

Mantid ->  $I(q_x, q_y)$

SasView -> model parameters

2D scattering kernel: Orientated cylinder

EUROPEAN SPALLATION SOURCE

# Summary

- ◆ Straight forward to add scattering kernels to McStas from other c-code
- ◆ Consider if your favorite analysis tool can be linked to McStas

# Exercise

- ◆ Load `templateSasView_Mantid.instr`
- ◆ Try 2 or 3 different models
- ◆ Try to write your own SANS scattering component
- ◆ Use `Sans_spheres.comp` as template
- ◆ Try e.g. the `broad_peak.py` model from SasView
- ◆ See [https://github.com/SasView/sasmodels/blob/master/sasmodels/models/broad\\_peak.py](https://github.com/SasView/sasmodels/blob/master/sasmodels/models/broad_peak.py)
